Write a python script to print hello world.

A screenshot of a Sublime Text editor window. The title bar shows the file path 'C:\Users\jayad\Documents\hello.py' and the application name 'Sublime Text (UNREGISTERED)'. The menu bar includes 'File', 'Edit', 'Selection', 'Find', 'View', 'Goto', 'Tools', 'Project', 'Preferences', and 'Help'. The editor area has a dark background and shows a single line of Python code: `print('Hello World!')` on line 1.

Convert the script into executable (use pyinstaller or py2exe – any of your choice).

Schedule a task named “Python execution” to run the above executable on the first Monday of every month.

A screenshot of a Windows Command Prompt window titled 'C:\WINDOWS\system32\cmd.exe'. The command entered is `C:\Users\jayad>SCHTASKS /Create /SC MONTHLY /MO first /D MON /TN "Python_Execution" /TR "C:\Users\jayad\Documents\hello.py" /ST 11:00`. The output is `SUCCESS: The scheduled task "Python_Execution" has successfully been created.` The prompt is now `C:\Users\jayad>`.

Schedule a task named "Executor" on your machine to run calculator for every five minutes starting from the specified start time with no end

```
C:\Users\jayad>SCHEDTASKS /Create /SC MINUTE /MO 5 /TN "Executor" /TR "C:\Windows\System32\Calc.exe" /ST 11:00
SUCCESS: The scheduled task "Executor" has successfully been created.
